# Julio Ramirez

## Senior React & React Native Engineer | React Native, React, TypeScript, GraphQL

Chicago, IL | julio.ramirez9409@gmail.com | Portfolio | LinkedIn | GitHub

### SUMMARY

Senior engineer with 9+ years building React and React Native products, with 5 mobile apps shipped to the App Store and Google Play (React Native and Ionic). At Best Buy I build Cart and Checkout and an AI search experience, and migrated checkout's native integrations to React Native's New Architecture. Former Tech Lead of teams of 3 and 5.

### EXPERIENCE

**Senior Frontend Engineer**, Best Buy (contract via Bhuvi IT Solutions, then RKMC) | Jan 2023 – Present

- Migrated cart and checkout native integrations (Apple Pay, device capabilities) from the legacy bridge to **typed TurboModules** during the React Native **New Architecture** upgrade, in an app built by many feature teams.
- Own frontend features on **Cart and Checkout**, a critical high-traffic surface, in React, TypeScript and Apollo GraphQL; every release ships behind feature flags and A/B tests.
- Primary frontend engineer for an **AI-driven search experience** running alongside classic search: mobile filter drawer and toggle, A/B routing, URL and state sync across both experiences, accessibility; led a typed refactor of shared analytics APIs.
- Profiled the React Native cart's cold start; argued for targeted fixes over a rewrite and helped refactor a heavy hook (memoization, refs over effects), cutting line-item **re-renders**.
- Designed an **AI-assisted development workflow** connecting 5 repos with shared architecture rules, Jira and GitHub context, cutting routine bug resolution from **days to hours**.

**Full-Stack Engineer**, Beek.io, YC-backed audiobook startup (part-time) | Mar 2023 – Jul 2024

- Built the **native audio player** (mostly Android/Kotlin, some iOS): playback, seek, background audio, lock-screen controls and offline downloads, exposed to React Native.
- Split React Native features into modules shared by separate iOS and Android host apps through **TurboModules**; automated Android releases with **Fastlane**.

**Senior Full-Stack Engineer**, Dell Technologies | Oct 2022 – Jan 2023

- Cut page load time about **20%** on the slowest pages of an internal cloud platform with predictive prefetching and caching, leaner GraphQL queries and memoization; presented results to product stakeholders.

**Senior Full-Stack Engineer**, Encora (Unbounce, then a SaaS client) | Jun 2021 – Oct 2022

- First offshore engineer on Unbounce's editor team; built features for the next-gen landing-page editor as **server-side-rendered micro-frontends**, moving legacy Module Federation code over.
- Tech lead of 3 for a SaaS client: cut CI from **3–4 hours to 5–30 minutes** by replacing barrel imports with direct imports and running only the tests a change affects.

**Tech Lead / Senior Full-Stack Engineer**, Globant | Nov 2019 – May 2021

- Tech lead of 3 on a CMS-driven Angular site for a US insurer: 1:1s, team-agreed standards and GitHub Actions quality gates; engineers grew into area owners and one into a tech lead.
- **ShareTown:** built a hybrid logistics app from scratch (Ionic, Angular) as one of two senior engineers, with custom native plugins (Android GPS tracking in Java, barcode, camera).
- **American Express Travel:** maintained a React and Redux booking site over a Node.js layer integrating the Expedia API, with performance work.

**Tech Lead / Full-Stack Engineer**, GFT Group | Oct 2018 – Nov 2019

- Led a team of 5 engineers delivering Banco Sabadell's business and personal banking apps (Angular, Ionic, Node.js) to the App Store and Google Play, deployed through Kubernetes and Jenkins.

**Frontend Engineer**, Geekbears | Aug 2017 – Sep 2018

- Built the **Dumpling** grocery-delivery app (React web and React Native) for a San Francisco startup, shipped to both app stores.

### PROJECT

**CTO and Co-founder**, SparkNight, date-planning app (pre-launch) | 2024 – Present

- Next.js and TypeScript app on a Node.js GraphQL API that aggregates Google Maps, Foursquare and Ticketmaster data, with a location-keyed Redis and PostgreSQL cache refreshed weekly to stay within free tiers.

### SKILLS

**Mobile:** React Native, Expo, TurboModules (JSI), native modules in Kotlin and Swift, push notifications, Fastlane, iOS and Android store releases
**Frontend:** React, TypeScript, JavaScript, Next.js, Zustand, Redux, Apollo GraphQL
**Backend:** Node.js, Express, GraphQL, REST, PostgreSQL, MongoDB, Ruby on Rails
**Testing and delivery:** Jest, React Testing Library, Cypress, Sentry, Datadog, feature flags, A/B testing, GitHub Actions, Jenkins
**AI:** AI-assisted development (Claude, Copilot) | **Languages:** Spanish (native), English (fluent)

### EDUCATION

**B.Sc. Informatics Engineering**, UPIICSA, Instituto Politécnico Nacional, Mexico City | 2012 – 2016
